

SHISHIR BHURTEL

+977 9867524330 · bhurtelshishir@gmail.com · www.shishirbhurtel.com.np
Lalitpur, Bagmati, Nepal

Self-motivated and enthusiastic Backend Developer with 5+ years of industry experience and 2 years of freelance experience in Node.js, Python, and PostgreSQL. Skilled in designing and developing APIs, real-time data processing, AI engineering and cloud-based deployments. Passionate about backend optimization and creating secure, scalable, and maintainable solutions.

STRENGTHS

Backend Development	Database Designing	Team Leadership
AI Engineering	Frontend Development	Communication
API designing	Testing	Cloud Services

TECHNICAL SKILLS

- **Languages:** Python, Javascript, Typescript, Go
- **Backend:** Django, Node.js, Express.js, Fast API
- **Frontend:** React.js, Next.js
- **Databases:** PostgreSQL, MongoDB, MySQL, ChromaDB
- **Tools:** Git, Docker, AWS, Jenkins, Langchain, Langgraph, Crew AI
- **Testing:** Pytest, Jest, SuperTest
- **Development Practices:** Test-Driven Development (TDD), Agile Principles, Domain Driven Design

EXPERIENCE

Spacebrain.ai | AI & Backend Engineer October 2025 - Now

Building the AI layer of a go-to-market platform that brings CRM, marketing, conversations and payments into one workspace. I work on the assistant and agent systems – LangGraph orchestration behind FastAPI services.

Accomplishments:

- **Agent Orchestration:** Built multi-step AI agents with LangGraph behind FastAPI services, enabling the assistant to work across CRM, marketing and conversation data.
- **RAG Pipelines:** Implemented retrieval over customer records and documents using pgvector and PostgreSQL, grounding responses in each customer's own data.
- **Tool-Calling Workflows:** Developed tool-calling actions that draft customer replies and prepare workflow steps, with human approval for consequential actions.
- **Evaluation and Tracing:** Set up LLM evaluation and tracing so prompt and model changes are measured before release and failures can be debugged from real traces.
- **Backend Services:** Developed asynchronous Python services with FastAPI and Celery for ingestion and background processing, containerized with Docker.

AppCentric | Full stack developer Dec 2024 - June 2025

Helped the US based startup to deliver multiple projects in a short period of time. Contributed to acquire 10K+ daily users in multiple projects. Worked on two key projects: BackTolt and BidStruct.

Accomplishments:

- **Optimized RESTful APIs:** Enhanced API response times by 10% and reduced database query times by 8%, leading to improved user engagement and satisfaction.
- **Third-Party Integrations:** Successfully integrated third-party services and implemented caching strategies, resulting in a more responsive and efficient application.
- **Developed and integrated React.js and Redux.js,** along with various UI libraries, to create an intuitive and user-friendly interface for the government-based bidding platform.

Contributed to backend and frontend structure of various services provided by company. Helped to accomplish multiple national level projects in Netherlands and Germany.

Accomplishments:

- Developed and maintained RESTful APIs using Node.js, Next.js and MongoDB.
- Implemented backend security preventing XSS, SQL injections, CSRF issues.
- Worked on national level projects, Government Exam Assigning platform in PayloadCMS being one of them.
- Collaborated closely with teams, implementing Domain-Centric Architectures.
- Improved backend architecture to handle more than 10K concurrent users.

Freelance Web Developer**May 2021 - June 2023****Fiverr, Upwork**

Offered custom web development services on popular platforms like Fiverr and Upwork. Specialized in creating tailored solutions for clients ranging from small businesses to entrepreneurs with node.js and django based software solutions.

Accomplishments:

- Completed over 75 orders with over 40 unique clients all over the world.
- Achieved "Level 2" status on Fiverr and became a "Top Rated" freelancer on Upwork.
- Consistently delivered high-quality results exceeding client's expectations, resulting in positive feedbacks, repeat business and referrals.
- Committed to delivering projects on time and budget, maintaining transparency and open communication with clients.

COMMUNITY INVOLVEMENT

Tech Team Lead**February 2020 - April 2021****Ecstatic Paradox**

Led the planning, design, and delivery of multiple community-focused software projects, including web based applications, ML models etc

Accomplishments:

- Mentored and managed a cross-functional team of developers, designers, and contributors, fostering a culture of collaboration and learning.
- Acted as a bridge between the technical team and non-technical stakeholders, ensuring alignment on project goals and user needs.
- Collaborated on community outreach initiatives by organizing hackathons, tech talks, and open-source contributions.

Liftrava:- An offline-first fitness tracking SaaS

Developed a full-stack fitness platform across four deployed apps: a REST API, an athlete PWA, an admin console and a marketing site. Lifters can start, log and finish a workout with zero signal, and everything syncs once the connection returns without losing or duplicating data. Training plans are built from what each user actually trains, with AI-generated targets for the next session.

- Built an offline-first PWA with idempotent syncing and a local replay queue, guaranteeing no duplicate or lost sets.
- Implemented AI-generated next-session targets (weight, reps, deload) from each user's real training history.
- Developed a 187-exercise library with smart search, PR tracking and a 3D muscle-recovery map.
- Integrated Paddle subscriptions, guest mode with history import on signup, and push reminders timed to each user's usual gym hour.
- Verified the system end to end with automated browser tests, including emulated offline and slow networks.

ShareMeDirect:- A Peer to peer file transfer system

Developed a peer-to-peer (P2P) file transfer platform, enabling secure, serverless file sharing using WebRTC and WebSockets. The platform ensures seamless real-time data transfer, maintaining privacy and high availability without reliance on centralized storage for multiple peers.

- Created a websocket server for transferring ICE candidates.
- Implemented WebRTC connections for sharing files between peers.
- Implemented File download limit in the same system.
- Developed the frontend of the system with next.js.

Penvoke :- A social media for writers

Created and implemented the entire backend solution for Penvoke, a social media platform designed to connect writers, literature enthusiasts, and content creators using Level 3 **Richardson's maturity Model**. This platform allows users to share their writings, interact with posts, and create a network around shared interests.

- Developed RESTful APIs using Express.js.
- Implemented Socket.IO for real-time communication and notifications.
- Used Redis caching to optimize performance.
- Containerized the app with Docker for easier deployment.
- Set up Prometheus for monitoring and Winston for logging.
- Enabled secure authentication with JWT and OAuth.
